Branden,

Per Brad's request I sent you a file with the latest aerial photograph that I possess. Unfortunately the e-mail was rejected by your server, presumably because the file size (17 Mb) was too large.

I have tried four times this morning to upload the file to your ftp site with no success (although I was able to upload lab report files that were even bigger than the photo file.

At this point I have no ready solution to provide you with a photo.

I am trying to get a more recent photo from Bridgeton which may be a smaller file size so I will try again when I receive that file.

Sorry, Paul

Subject: WLL - Best topo/aerial survey

Can you provide Braden and I with a recent high-quality aerial/topo of the site that we can use prior to and during the outfall recon?

Thanks,
